Temprotech's Correx board in use by NMC

These pictures show employees of Norwegian Marine Construction (NMC) working on the refurbishment of Holland America Line's 'Ryndam' at Victoria Shipyards on Canada's west coast. NMC had chosen to protect their areas of operation with a custom printed version of Temprotech's Correx® board sheets. In addition to their use by NMC, the flame retardant Correx® sheets proved popular with other turnkey contractors working on this and other refurbishment projects.
