Foam 'Over Board'

UK-based Temprotech Limited, currently have ALVEOLEN and ALVEOLIT on trial with the British Navy as a replacement for traditional floor and wall protection materials used during newbuild and refurbishment of vessels.

Although a single layer of technically advanced ALVEOLIT carries a premium, it is comparable with the combined cost of multi-layer sheet and hardboard solutions, and provides far superior impact protection and performance. Supplied in roll form, lightweight, flexible and easy to cut, it also offers significant labour efficiencies, time and cost savings in its fitting and removal.

Further products are being developed in partnership with Temprotech to meet the future flame retardant temporary protection requirements of the naval, cruise and ferry markets.
