

## Introducing Rigilite®

the sandwich panel that's  
as light as a feather

November 2004

In a slight departure from their established focus on temporary protection technologies, Temprotech Limited have introduced a new product to their portfolio - an extremely lightweight M1 approved sandwich panel.

Based on the successful Correx® protection board sheet, Rigilite® is a new concept in sandwich construction material for permanent installation in the marine and offshore markets. It comprises two coated aluminium sheets laminated over a twin wall polypropylene core, making the sheet extremely lightweight and suitable for walls and ceilings in cabins, wetrooms and public areas. The aluminium sandwich gives the product exceptional flatness, rigidity and is ideally suited to custom printing.

The panels, available in 3.5mm, 5.0mm and 10mm thicknesses, is well suited to a wide range of fabrication methods including sawing, drilling, machining, riveting, screwing, cutting, milling and folding with standard sheet metal machinery and production techniques.

Please contact Temprotech Limited for further information, samples and datasheets.
